

Number Plate Recognition Tower

NETAVIS Number Plate Recognition Tower is the compact hardware solution for vehicle number plate recognition

The NETAVIS Number Plate Recognition Tower is optimized for iCAT NPR products and includes all necessary hardware components for reliable number plate recognition in a compact arrangement.

The integrated Mobotix LPF camera with matching lens and IR illuminator provides optimal number plate recognition even in difficult lighting situations. Inside the robust aluminium housing, the camera with power supply, as well as the power outlet (for service engineers), are perfectly protected from acts of vandalism and weather influences. The compact design allows for easy positioning in almost any kind of terrain and optimal adjustment indoors as well as outdoors. An optionally available sunblind protects from sunlight irritations, the colouring can be adapted according to customer wishes.

The Number Plate Recognition Tower can be integrated with external systems like barrier or transponder chip solutions for which optional interfaces and extensions are available.

Technical details

- Material: aluminium
- Height: 910 mm
- Width: 180 mm
- Depth 180 mm
- Colour: RAL 9006 or customer's request

Infrastructure requirements

- 230 V for power supply
- LAN as cat. 7 copper wire or LWL

Product code

- NPR-T
