

# Telekom Austria

The professional video management platform NETAVIS Observer is offered as an OEM service by Telekom Austria.

*„Innovative and efficient.”*

GERHARD SELTENHAMMER  
SECURITY MANAGER  
TELEKOM AUSTRIA

## Challenge

Telekom Austria Group is the biggest telecommunications company in Austria with a total revenue of EUR 4,33 billion in the CEE region in 2012. The diversified portfolio includes products and services in the field of voice telephony, broadband Internet, multimedia services, data and IT solutions, wholesale and payment solutions.

Therefore the requirements for an OEM IP video management platform are accordingly high. On the one hand, professional video surveillance shall be offered in the project business. On the other, the software should also be suitable as application service.

The unlimited scalability of thousands of cameras from different manufacturers and the possibility to operate the software in a high-availability data centre are also part of the conditions for the cooperation.

## Solution

With the individually to their needs adjusted NETAVIS Observer OEM version, Telekom Austria got a very strong overall package. It combines the strengths of a flexible, open and widely spread video surveillance software with the possibility of operating it as a multitenant application service.

The high compliance of the NETAVIS software with CCTV and IT standards, in this particular case with the computer centre of Telekom Austria, was essential for the success of this service.

## Benefits

The NETAVIS Observer OEM version offers one of the best video management solutions with strict cost control and high service quality for Telekom Austria customers who don't want to invest in servers and maintenance themselves. They can simply log into the NETAVIS server of the Telekom Austria via internet. By using a robust high-availability cluster, the 24/7

operation of this video surveillance solution is guaranteed. With the interface SNAP XML the software is integrated in the central control system of the telecommunications company.

The video management platform is known for its high compliance and scalability. Specific modules of the seamlessly integrated NETAVIS iCAT video analytics enable people counting, number plate recognition, perimeter security and much more.

Telekom Austria also protects its own infrastructure with NETAVIS Observer. The 85 shops of the division mobile telephony for example, are all protected by video surveillance.

With over 8.000 successful installations in Europe and the Middle East and 10 years of experience in IP video management and video analytics, NETAVIS software has been a reliable partner of Telekom Austria.
